Sta-Lok with the part numbers shown are supplied with wedges for 1x19 wire. Any other wedges can be substituted on a special order basis; these parts will have different part numbers. Sta-Lok studs terminals can be ordered with Sta-Lok turnbuckles. They will fit all turnbuckles using the UNF thread also. Most yacht standing rigging using UNF threads have a left-hand thread fitted to the bottom of the turnbuckle and a right-hand thread fitted on the wire. A right-hand thread will slope up to the right when holding the stud in a vertical position (like the thread on a light bulb). See page 42 for an example. If you see a left-hand thread on a wire rope terminal for standing rigging, in most cases, it will be a metric thread (which also is coarser than UNF thread).

(*) UNF thread - Right Hand Thread Only. Metric threads and Left Hand Threads are available through special order.

Sta-Lok Terminals supplied with 1x19 wedges unless otherwise specified.

Long Stud Terminal

Sta-Lok stud terminals on this page have a right hand UNF thread with a diameter indicated in the table. This thread will fit most turnbuckles found on boats in the USA. Before ordering check your turnbuckle to determine the thread. Many vessels from overseas will have turnbuckles with metric threads. In most cases where the original stud has a metric thread it will also be a left hand thread. Sta-Lok studs are available with metric threads and also with a left-hand or a right-hand thread.
